

## Final Project Outline

For my final project, I will be making a portfolio. The website can be navigated using the keyboard: Clicking left or right will switch you from page to page.

The first page will be the home page, a simple landing page with some animations on it.

There will be a UX/UI portfolio overview. There will be thumbnails for each project. When clicked on, they will navigate you to a different page that is the detailed page for that specific project.

The next page will be a graphic design portfolio with a modal that has navigation similar to that of reveal.js. Clicking next will bring up the next graphic design project I have worked on and pressing down will allow you to delve deeper into that project, allowing you to see the different iterations. There will be captions along the bottom for each image.

Next will be a portfolio for my CS projects. This page might have animations and A-Frame to allow you to navigate through VR.

There will then be a simple about page with my photo and some text about myself.

Finally there will be a page that holds my resume.
